

Umar Munshi

Software Engineer — Full-Stack & Systems Developer

+91-9019349645 — umarmunshi25@gmail.com — **GitHub:** UmarM01 — **LeetCode:** Umar250

Summary

Software Engineering student focused on building production-grade web platforms, AI systems, and business automation tools that solve real operational problems. Experienced in developing high-traffic applications, REST APIs, multi-agent AI systems, third-party integrations, and cloud infrastructure. Skilled at translating complex business workflows into reliable full-stack systems using Python, TypeScript, FastAPI, Node.js, Next.js, and modern cloud infrastructure.

Skills

Languages: Python | JavaScript | TypeScript | SQL | Java | HTML | CSS

Frameworks & Web Tools: Next.js | React | TailwindCSS | Node.js | Express | FastAPI | REST APIs

AI & Intelligent Systems: LangGraph | LangChain | Groq AI | OpenAI APIs | Whisper Speech-to-Text

Cloud & Infrastructure: AWS EC2 | AWS S3 | Cloudflare R2 | PostgreSQL | MongoDB | Supabase | Nginx | VPS

Integrations: PayU | Razorpay | Juspay | MSG91 | WhatsApp API | Webhooks | OAuth | JWT

Core Concepts: Business Automation | Multi-Tenant Systems | RBAC | SEO | System Design

Experience

Lowe's India

June 2026 – Present

Software Development Intern

Bengaluru, India

- Completed structured Job Ready Employability Skills training covering professional communication, workplace collaboration, problem-solving, and industry readiness.
- Completed hands-on MERN stack development training, building proficiency in MongoDB, Express.js, React, and Node.js through practical development exercises.
- Built full-stack applications covering frontend development, REST API implementation, backend architecture, and database integration using the MERN ecosystem.

Projects

Zoopify – Refurbished E-Commerce Platform (zoopify.in) | *FastAPI, Next.js, PostgreSQL, AWS EC2, Cloudflare R2*

- **Built and deployed a production refurbished electronics platform** featuring a 317-endpoint REST backend across 47 FastAPI modules with AWS EC2 and Cloudflare R2 infrastructure.
- Engineered a multi-gateway payment layer integrating PayU, Razorpay, and Juspay with PostgreSQL pessimistic locking and server-to-server reconciliation to prevent unit double-booking.
- Implemented concurrency-safe GST invoice generation using PostgreSQL upserts and row-level locking, alongside production Nginx reverse proxying, SSL, and custom domain routing.
- Optimized server-side metadata and dynamic components to achieve Lighthouse scores of **100 SEO, 100 Accessibility, and 96 Best Practices**.

Selligo – Consumer Electronics Selling Platform (selligo.in) | *Node.js, Express, Next.js, MongoDB, AWS S3*

- **Built and maintained a production recommerce platform serving 1,000+ daily visitors**, enabling dynamic device valuation, doorstep pickup scheduling, and end-to-end used-device sales.
- Engineered a **164-endpoint Express REST backend across 22 route modules and 20 MongoDB schemas**, supporting customers, orders, field operations, promotions, CMS, and administrative workflows.
- Developed a configurable device valuation engine and **10-zone fulfillment system** connecting Admins, Partners, and field Pickers for pincode routing, order assignment, KYC/IMEI verification, and fulfillment.
- Integrated MSG91 OTP and AWS S3 while deploying Next.js SSR, Express, MongoDB, PM2, Nginx, and SSL on production Linux VPS infrastructure.

VitalBridge – Multi-Agent AI Hospital System | *FastAPI, LangGraph, Groq/OpenAI, Supabase, React*

- **Designed a real-time emergency triage system** connecting moving ambulance audio streams to hospital ER preparation dashboards through a 4-node LangGraph StateGraph pipeline.
- Integrated OpenAI/Groq Whisper for in-memory speech transcription with zero disk persistence to automatically classify emergency trauma information.
- Orchestrated **5 concurrent role-bounded LLM agents** with deterministic fallback handlers to assign ER bays, calculate blood-bank requirements, and dispatch preparation checklists.

Meraki – Digital Inheritance & Vault Platform | *FastAPI, Supabase, Gemini AI, Next.js*

- **Engineered an encrypted digital inheritance vault** using application-layer Fernet encryption to secure sensitive information across 12 asset categories.
- Built a 6-stage automated liveness escalation workflow issuing tokenized check-ins through SMS, WhatsApp, and email with vacation-mode suppression.
- Integrated Gemini AI to interpret asset distribution intent and generate legal claim documentation accessible through single-use 64-character tokens.

Achievements & Certifications

- **LeetCode Problem Solving:** 100+ problems solved across data structures, algorithms, and dynamic programming.
- **Samsung Innovation Campus:** Completed Machine Learning certification covering predictive modeling, statistical data analysis, and practical AI applications.

Education

Cambridge Institute of Technology

Bengaluru, India

Bachelor of Engineering in Information Science and Engineering (CGPA: 7.9 / 10)

Expected 2027
